"INFINITI" MATERIALS

METALS

Metals are an important part of our products: they are used in order to realize frames for chairs and table structures. Infiniti has made a long and accurate research on materials and relative working technologies. In our factories we have reached elevated skills in steel and aluminium moulding/casting.

STEEL

Steel is used to produce frames for chairs and stools, by using round or squared tubes as well as solid rod all in high resistance. Furthermore, thanks to advanced technologies (laser 3D cutting machine), we are able to gain more complex shapes. Our products are available with different surface finishes and high quality standard. (painting, satin finishes, chromium-plating).

ALUMINIUM

This metal combines characteristics of lightness with an elevate resistance and natural beauty of the surfaces. Aluminium surface can be anodized, a special treatment in order to increase the resistance to corrosion making the surface more opaque. Infiniti uses this metal in 3 different methods:

- Die cast: used to produce chair legs in the following finishes: polished - chromed - satin
- Anodized aluminium tube
- Extrusion.

PLASTIC MATERIALS

Infiniti, always interested in new technologies, heads to an innovative and updated development: for its production it uses both thermoplastic and thermosetting polymers. The plastic materials range from the polycarbonate to SAN to polypropylene, allowing the realization of a wide range of different finishes and characteristics. All the materials are recyclable in the respect of the environment.

POLYPROPYLENE PP

Its main feature is its high resistance to heat and abrasion. Furthermore it is non-toxic, antistatic, scratches and stains resistant. It has a high resistance to atmospheric agents, so is meant for outdoor usage.

POLYCARBONATE PC

It is a non-toxic plastic material with excellent mechanical properties, as extension, breaking load, impact strength and bending resistance. It can be injection pressed, allowing in this way to achieve different thicknesses in order to improve the mechanical characteristics of the product. The polycarbonate is transparent like glass, antistatic, unbreakable and resistant to UV rays.

SAN: Styrene Acrylonitrile Copolymer.

The colour range goes from the transparent colours to fume shading until shiny or opaque colours with polished surfaces. Its main properties, in spite of its transparency, are its good resistance to chemical agents, its excellent stability in the cleaning treatments, together with a high resistance, inflexibility, dimensional stability and resistance to sudden changes in temperature.

FOAMED POLYURETANE

Product that uses a polyurethane foam injected into a mould. Mostly the foam covers a frame, in other cases it is glued on surfaces or rigid components. When the product is foamed the feeling is of extreme softness but at the same time of excellent stability leading to a very comfortable sensation.

INTEGRAL POLYURETHANE

This product uses a polyurethane foam injected into a mould. The foam covers a frame. The part is coloured by directly painting the mould and the foam also copies the finish of the mould. This type of material offers a perfect combination of comfort and brightness of colour.

WOOD

Infiniti works in the respect of all the national and international laws concerning the environment, this is achieved through the mutual cooperation with partners / suppliers that support the non-government organization FSC (Forest Stewardship Council) that operate in order to ameliorate sustainability of the forests all around the world. FSC certified companies are able to guarantee that the woods used in their production processes, come from forests that are managed properly and responsibly, in conformity with environmental - social and economical standards. Infiniti uses paints and glues of low formaldehyde emission, using rationally the raw material. The wood used is selected among the best present in the market. Its particular processing allow to guarantee resistance and last through time. Being a natural material, difference in colour can occur between each lot of wood, but these differences cannot be considered a flaw but on the opposite side a guaranty of the authenticity of the wood used.

SLICED ASH

It is an overlapping of ash-layers, that forms blocks which are later sliced perpendicularly to the direction of the various layer. The result is a surface that has a regular and homogeneous veining.

COMBINATION OF OAK

It is an overlapping of different light smooth layers of wood of the same kind that creates the same effect concerning the veining and the colours of the most valuable woods.

MDF (MEDIUM DENSITY FIBREBOARD)

The wood fibres are mixed with resins and then pressed to eliminate the air before the final pressing operation. The heat and the pressure activate the resin which "binds" the fibres, creating the MDF panel.

MULTI LAYERS

It is an overlapping of different sheets of sliced wood that are later glued together making a plywood.

3D MULTI LAYERS

It is an overlapping of different sheets of sliced wood that are later glued together making a single piece to be combined with the 3D engineered wood. This is a particular patented material meant to be bended in any complex 3 dimension shape without cracking.

NEWPANN

Aluminium composite panel with lacquered or oak veneer finish.

FABRICS

Infiniti uses fabrics that belong to a wide range of colours and patterns, which are all tested in order to achieve the best performance, among which resistance to abrasion and artificial light. The chair and armchair upholstery fabrics come in a wide range of bright colours. Fireproof fabric and imitation leather upholstery are also available. The Kvadrat collection, now available, offers top quality and high performance. The fabric can also be supplied by the customer.

LEATHER

Top quality European full-grain leather is used for the Infiniti upholstery. Several are the possibilities to chose among leather of different shades. It is soft and elegant but at the same time very resistant. It is the results of long stages of working. Leather is tanned with chrome and pigmented with resins in a water solution. Several are the tests made in order to achieve the right level of softness and elasticity.

USAGE AND CARE

PLASTIC MATERIALS

Cleaning advices: Plastic surfaces usually needs to be cleaned with a normal cloth and warm water, we recommend not to use dry cloths otherwise the scratch might generate an electrostatic load that capture dust. For the most persistent stains a small amount of liquid soap diluted in water may be used. We recommend to avoid strictly the use of acetone, trichloroethylene, ammonia and detergents that contains even just a small amount of those substances as they can turn bright shiny surfaces into opaque very easily. We recommend as well to avoid all types of abrasive substances, like for example powdered cleaning products, creams, score pads and rough sponges. Usage: Avoid to drain on the surfaces objects that can scratch the material. We also remind that plastic cannot cope with warm surfaces of elevate temperatures placed directly on top of the item, an example might be not to place warm pans or pots.

PLYWOOD

Cleaning advices: Plywood surfaces usually needs to be cleaned with a normal cloth and warm water, we recommend always to dry immediately after the cleaning process. All liquids or other residue must be removed in order to avoid the absorption of the same. Usage: Being plywood a natural material you might notice an alteration in the colour shade during time and use. We also remind that plywood cannot cope with warm surfaces of elevate temperatures placed directly on top of the item, an example might be not to place warm pans or pots; so can change the colour of the shell.

METALS

Cleaning advices: Plastic surfaces usually needs to be cleaned with a normal cloth and warm water, for the most persistent stains a small amount of liquid soap diluted in water may be used. We recommend always to dry immediately after the cleaning process by using a soft cloth or a leather one. Never use: cleaning products for steel ovens, chlorine, bleach, or other strong detergents. Avoid abrasive creams, score pads and abrasive sponges that can scratch the metal surfaces. Usage: Mind the stains of food such as coffee, juices, coke, if not removed immediately they might leave indelible marks on the surface.

FABRICS

Cleaning: see care and washing advice on finisher. Usage: We remind you that fabrics are extremely delicate it is therefore very important to look carefully at the kind of wash suggested and pay particular attention while using because they are subject to be ripped or cut.

LEATHERS

Cleaning advices: Clean with a soft cloth with warm water. Usage: We remind that leathers are extremely delicate, it is therefore very important to look carefully at the kind of wash suggested and pay particular attention while using because they are subject to be ripped or cut. Exposition in spaces with an elevate percentage of humidity might cause structural modifications.

RECYCLABILITY

The Infiniti range is built for the majority in metal elements, plastic materials and in plywood, all materials 100% recyclable. Metal for example is one of the most recycled materials on planet earth and allowed a saving of about a 95% of the energy otherwise used to obtain it from the raw material. The metals received are sent to dedicated centres to be divided into iron and non iron trough magnets,

floating methods, air and manually. Chemical analysis might be done to divide further the rubbish. Non iron materials, such as aluminium, are pressed together in balls and sent back to the foundries. In the foundries the metals are melted again and the production process begin from point 0, returning into raw material, ready to be used for the production of brand new products. To re-use, recycle and recover are primary targets in the UE environmental policy that rules the usage of plastics materials, every day more parts that belongs to our normal lives. Plastic had a huge and global success in the past exactly for his characteristics, in fact plastic has the possibility to be moulded in any shape or dimension, throughout different technical solutions adapted according to the product: straining, mould injection, extrusion, injection. The main point of strength of this material are: lightness, workability. Our whole world seems like enveloped in a plastic film. The production of plastic in fact take only a 1,6% on the whole European consume of Oil. The most used materials are the one named thermoplastic, which are polymers that can be worked and moulded warm to be suddenly cooled in order to obtain the wanted shape. The process is absolutely reversible to guarantee an elevate recyclability. Plastic for his multiple uses properties can be found in many of the "Infiniti" products ranges. At the end of the use plastic can be reused in three main ways: the mechanical recycling meant to transform the material into another material; the plastic waste is becoming the starting point for the new products; the chemical recycling meant to transform the waste into raw material trough the melting of the same; the last is the energetic recovery contained into the plastic waste as oil derivate and therefore completely recyclable. Furthermore is only trough the recycling process that plastic can return to a new life. To make the process easier, Infiniti products are easily unassembled so that can be quickly recognised any basic element. Any plastic item produced is marked to identify the material used, according to the European legislations to guarantee the proper separation of the elements and their real and effective recycling.

CERTIFICATIONS AND REGULATIONS

Chairs, Tables and Stools by Infiniti are resistant and last various kinds of strains; for this reasons they are tested by CATAS Institute/ TUV or COSMOB to comply with requirements of UNI and UNI EN norms. On the following we have listed the UNI rules and respective tests that are carried out on chairs:

- UNI EN 1022 Norm (Stability),
- UNI EN 1728 (Static load on seat-back, fatigue resistance on seat-back, static load on side legs, impact on seat, impact on back, front seat edge resistance, vertical and horizontal static load on arm, fatigue on arm, static load on front legs).

Some products of Infiniti's collection are certified by GS mark. The GS or "Geprüfte Sicherheit" (tested safety) Mark is a voluntary certification mark applied to finished products that signifies their compliance with all of the statutory requirements of the German Product Safety Act (ProdSG). The scope of the GS Mark includes essential product characteristics such as electrical safety, chemical and hazardous material use, ergonomics and noise, and also covers an evaluation of a manufacturer's factory production. The GS Mark on a product remains valid provided that a manufacturer submits to an annual inspection of its production facilities.

DESIGN:

MARC SADLER

WITH THIS PROJECT MARC SADLER WANTED TO DEVELOP A "PLATFORM" PRODUCT WHERE HE COULD INTRODUCE AN ELEMENT OF DISCONTINUITY, MAKING IT POSSIBLE TO COVER DIFFERENT COMMERCIAL AREAS. THE COMFORTABLE, HIGH-PERFORMANCE BASE HAS BEEN PAIRED WITH A LIGHT POLYCARBONATE OR WOOD BACKREST, THEN IN THE "FULL BACK" VERSION WITH A MORE ENVELOPING ONE IN POLYURETHANE. BI 20S IS THE LATEST STRIKING CREATION TO BECOME PART OF THE FAMILY.
